

Customer Details

Client is Delhi/NCR based Enterprise having food processing units across India.

Business Problem

Client wanted to upgrade their existing software for accounting and inventory to manage their diversified business model.

Challenges:

1. We need to develop an application having multi-user, multi-level accessibility.
2. We need to integrate various departments involved in operations and management.

Our Solution

We offered complete ERP software solution to the client by making Intranet application having different accessibility roles and various modules. The major modules in the application are Vendor Accounts, Transactions, Inventory, Bar-code Integration, Reporting, and Data Export Wizard.

The complete project was planned on SDLC and implemented successfully. The application was developed on .NET framework with MSSQL database as backend.

Customer Benefits:

1. Client can now easily monitor all the activities regarding inventory and goods processing.
2. Reports generation became a USP for the management to quick review the efficiency of processing units.
